## **Overview**

The 2024 edition of Internal Revenue Service (IRS) Publication 6186, *Calendar Year Return Projections for the United States and IRS Campuses: 2024–2031*, provides the most recent projections of the number of tax returns expected to be processed for the United States and IRS campuses by major return category. It also includes projections for the number of returns to be filed by IRS examination class.

Publication 6186's projections provide a foundation for IRS workload estimates and resource requirements contained in the IRS budget and other major planning documents. The Statistics of Income (SOI) staff prepare these forecasts annually to incorporate changes in filing patterns, economic and demographic trends, legislative requirements, and IRS administrative processes. These projections are based on the information available as of August 2024 and do not include pending legislation or administrative initiatives under consideration.

## **Data Sources and Projections Methodology**

### ***IRS Data Sources***

The reported actual numbers of returns filed in Calendar Year (CY) 2023 are based on returns processed and recorded in the IRS Master Files. With few exceptions, these data are based on the same Master File reporting systems as those used for the IRS Data Book (Publication 55B). However, Master File counts were not available in some instances. In these cases, tallies of actual filings were provided by program staff in the IRS operating divisions, typically from data capture systems located at the IRS processing campuses.

### ***General Projections Methodology***

The projections presented in this publication are derived from various statistical models that capture and extrapolate historical filing trends by unique form types and filing mediums. Most of the models use time-series extrapolation methods, such as trended exponential smoothing. However, the projections for some return types are based on regression models that use the economic and demographic variables provided by IHS Markit as key input factors. Additionally, where historical data were limited or nonexistent, such as for new e-file products, the filing pattern for a comparable return type was applied.

### ***Impact of the Taxpayer First Act***

The Taxpayer First Act (TFA), enacted on July 1, 2019, made filing electronically a more widespread practice for business taxpayers. Two TFA provisions directly affect the projections provided in this publication. First, the TFA lowered the required electronic filing thresholds for corporations and partnerships starting in CY 2021. Second, the TFA made electronic filing mandatory for tax-exempt organizations (Form 990 series) and political organizations (Form 8872) starting in CY 2021. Both provisions have increased the number of electronic filings for the impacted forms and will ultimately either decrease or eliminate the number of paper filings.

### ***Digital Intake Scanning Initiative and Paperless Processing Initiative***

Since the Inflation Reduction Act passed into law in August 2022, the IRS has made significant progress towards adopting new digitalization technology. On March 8, 2023, the IRS announced a new Digital Intake Initiative to scan paper returns of select form types, including Forms 940, 941, and 1040. As of August 2024, the percentage of processed paper returns that were scanned was approximately 19.3% for Form 940, 18.2% for Form 941, and 3.1% for Form 1040. This digitalization effort will expand to include the scanning of other form types.

In August 2023, the IRS announced the Paperless Processing Initiative, which aims to work towards digitally processing all paper-filed tax returns. The projections provided in the 2024 update of Publication 6186 do not account for the Digital Intake Initiative and the Paperless Processing Initiative. As more data and program information become available, future Publication 6186 updates will establish a methodology for estimating scanned paper volumes.

## **Summary of Significant Publication 6186 Highlights**

### ***Historical Summary of the Number of Returns Processed in the United States***

Table 1 of Publication 6186 includes a high-level summary of the number of returns that were processed in the United States (U.S.) from CY 1989 to CY 2023, along with the estimated return volumes for CY 2024, and the projected return volumes for CY 2025 to CY 2031. The data in Table 1 are rounded to the nearest thousand.

### ***U.S.-Level Projections***

Table 2 provides forecasts of the number of tax returns expected to be processed in the U.S. for CY 2024 through CY 2031. Table 2's forecasts are the same as the ones provided in Table 1, however, Table 2 shows more details on the subcategories that were used to calculate the forecasts in Table 1. Three significant trends from this year's update of the U.S.-level projections are:

- In CY 2023, the share of total returns (individual income tax, business income tax, and tax-exempt organization returns) filed electronically was 80.9%. This share is expected to reach 83.0% in CY 2024 and will steadily increase over the next 7 calendar years, reaching 90.2% in CY 2031.
- Individual returns currently make up over 60.5% of all tax return filings. This trend is expected to continue in future CYs.
- Approximately 92.6% of individual returns were filed electronically in CY 2023. This trend is expected to reach 93.6% in CY 2024 and will grow to 97.0% by CY 2031.

### ***Campus-Level Projections***

The 2024 update of Publication 6186 contains projections for seven Submission Processing campuses. The projections represent the number of returns each campus is expected to process between CY 2024 and CY 2031. The campuses included in this year's update are the following: Andover Campus (Table 3); Austin Campus (Table 4); Cincinnati Campus (Table 5); Fresno Campus (Table 6); Kansas City Campus (Table 7); Ogden Campus (Table 8); and Philadelphia Campus (Table 9).

### ***Exam Class Projections***

In addition to the U.S.-level and campus-level projections, the 2024 update of Publication 6186 also provides projections for selected exam class categories. Table 10 includes exam class details for individual, business, estate, and gift tax return categories.

## Accuracy of Prior Projections

Table 11 provides a brief analysis of the accuracy of SOI's prior projections. Using 4 years of actual data from 2020 through 2023, the table presents the accuracy of SOI's national-level projections by major return categories. This analysis covers only the major return categories projected on a CY basis and serves as a general measure for approximating the overall reliability of SOI's U.S.-level return projections.

The table presents two measures of projection accuracy: (1) the mean absolute percent error (MAPE); and (2) the number of overprojections. The MAPE is computed as the average percentage projection error for the 4-year period, regardless of whether the projections were over or under actual filings in each of the four projection cycles. In addition, the number of overprojections can show whether projections are consistently over- or underprojected. A value of "2" indicates balanced forecasts over the four cycles.

The table groups these two measures by time horizon. The time horizon is determined based on the year a forecast was made and the year projected. For example, a forecast for 2023 made in 2020 would be part of the "3-years-ahead" time horizon.

NOTES:  
1. On March 8, 2023, the IRS announced a new Digital Intake initiative to scan popular paper forms, including Forms 1040, 940 and 941, beginning in 2023. In August 2023, the IRS announced the Paperless Processing initiative that aims to process all tax returns digitally by 2025. The projections provided in the 2024 update of Publication 6186 do not account for the Digital Intake initiative and the Paperless Processing initiative. Future Publication 6186 updates will consider how to reflect the scanned paper volumes, as more data and program information become available.  
2. Table does not contain non-Master File counts. Each of the forms listed under "Type of Return" is defined in the "Table Notes" of Publication 6186.  
Detail may not add to subtotal/total due to rounding.  
3. Projected volumes have been rounded to the nearest 100; therefore, values of 49 or fewer were rounded to 0. Additionally, actual volumes that are less than 10 have been rounded to the nearest 10.

## Table Notes

- Detail may not add to total due to rounding.
- Projected volumes are rounded to the nearest 100, therefore counts of 49 or fewer are rounded to 0. However, some forms show zero filings because the data are associated either with selected areas only or recently established or eliminated filing options.
- Actual and forecasted counts for the major categories are based on IRS Master File processing, as recorded in the electronic versions of the Report of Returns Posted to the IRS Master Files. The tax return counts presented in this document do not include non-Master File counts.
- Complete IRS Master File counts for CY 2023 were not available for Forms 8849 and 5558. IRS operating division staff members supplied these counts at the national level; some data were derived from secondary sources.
